LEAVING CERTIFICATE EXAMINATION, 2004

---

APPLIED MATHEMATICS – ORDINARY LEVEL

---

FRIDAY, 25 JUNE – AFTERNOON, 2.00 to 4.30

---

Six questions to be answered. All questions carry equal marks.

Mathematics Tables may be obtained from the Superintendent.

Take the value of  $g$  to be  $10 \text{ m/s}^2$ .

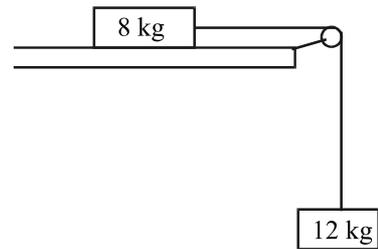

$\vec{i}$  and  $\vec{j}$  are unit perpendicular vectors in the horizontal and vertical directions, respectively, or eastwards and northwards, respectively, as appropriate to the question.

**Marks may be lost if necessary work is not clearly shown.**

---

1. Three points  $a$ ,  $b$  and  $c$ , lie on a straight level road such that  $|ab| = |bc| = 100$  m.  
A car, travelling with uniform retardation, passes point  $a$  with a speed of 20 m/s and passes point  $b$  with a speed of 15 m/s.
- Find the uniform retardation of the car.
  - Find the time it takes the car to travel from  $a$  to  $b$ , giving your answer as a fraction.
  - Find the speed of the car as it passes  $c$ , giving your answer in the form  $p\sqrt{q}$ , where  $p, q \in \mathbf{N}$ .
  - How much further, after passing  $c$ , will the car travel before coming to rest?  
Give your answer to the nearest metre.
2. (a) Ship A is travelling due north with a constant speed of 15 km/hr.  
Ship B is travelling north-west with a constant speed of  $15\sqrt{2}$  km/hr.
- Write down the velocity of ship A and the velocity of ship B, in terms of  $\vec{i}$  and  $\vec{j}$ .
  - Find the velocity of ship A relative to ship B.
  - If ship A is 5.5 km due west of ship B at noon, at what time will ship A intercept ship B?
- (b) Car P and car Q are travelling eastwards on a straight level road.  
P has a constant speed of 20 m/s and Q has a constant speed of 10 m/s.
- Find the velocity of P relative to Q.
  - At a certain instant car P is 100 m behind car Q.  
Find the distance between the two cars 3.5 seconds later.
3. (a) A smooth rectangular box is fixed to the horizontal ground.  
A ball is moving with constant speed  $u$  m/s on the top of the box.  
The ball is moving parallel to a side of the box.  
The ball rolls a distance 2 m in a time of 0.5 seconds before falling over an edge of the box.
- Find the value of  $u$ .
  - The ball strikes the horizontal ground at a distance of  $\frac{4}{\sqrt{5}}$  m from the bottom of the box.  
Find the height of the box.
- (b) A golf ball is struck from a point  $r$  on the horizontal ground with a speed of 20 m/s at an angle  $\theta$  to the horizontal ground. After  $2\sqrt{2}$  seconds, the ball strikes the ground at a point which is a horizontal distance of 40 m from  $r$ .
- Find the initial velocity of the ball, in terms of  $\vec{i}$  and  $\vec{j}$  and  $\theta$ .
  - Find the angle  $\theta$ .

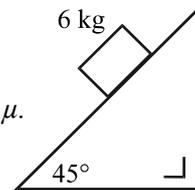

4. (a) Two particles, of masses 8 kg and 12 kg, are connected by a light, taut, inextensible string passing over a smooth light pulley at the edge of a smooth horizontal table.

The 12 kg mass hangs freely under gravity.  
The particles are released from rest.  
The 12 kg mass moves vertically downwards.

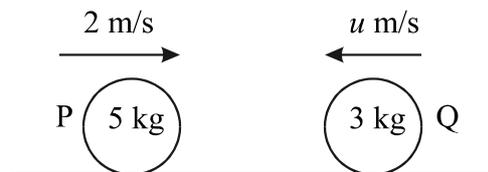

- (i) Show on separate diagrams all the forces acting on each particle.  
(ii) Find the acceleration of the 12 kg mass.  
(iii) Find the tension in the string.

- (b) A particle of mass 6 kg is placed on a rough plane inclined at an angle of  $45^\circ$  to the horizontal. The coefficient of friction between the particle and the plane is  $\mu$ . The particle is released from rest and takes 4 seconds to move a distance of  $10\sqrt{2}$  metres down the plane.

- (i) Show on a diagram all the forces acting on the particle.  
(ii) Show that the acceleration of the particle is  $\frac{5\sqrt{2}}{4}$  m/s<sup>2</sup>.  
(iii) Find the value of  $\mu$ .

5. (a) A smooth sphere P, of mass 5 kg, moving with a speed of 2 m/s collides directly with a smooth sphere Q, of mass 3 kg, moving in the opposite direction with a speed of  $u$  m/s on a smooth horizontal table.

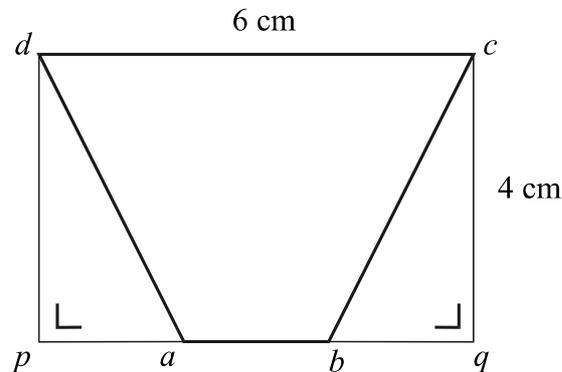

The coefficient of restitution for the collision is  $\frac{1}{2}$ .

As a result of the collision, sphere P is brought to rest.

- (i) Find the value of  $u$ .  
(ii) Find the speed of Q after the collision.
- (b) A ball is dropped from rest from a height of 1.25 m onto a smooth horizontal table. The ball hits the table with a speed of  $v$  m/s and then rebounds to a height of  $h$  metres above the table. The coefficient of restitution between the ball and the table is 0.8.
- (i) Find the value of  $v$ .  
(ii) Find the value of  $h$ .

6. (a) A rectangular lamina  $pqcd$  measures 6 cm by 4 cm. Two triangular pieces  $dpa$  and  $cbq$  are removed from the rectangular lamina to form the shape  $abcd$  as shown where  $|pa| = |ab| = |bq| = 2$  cm.

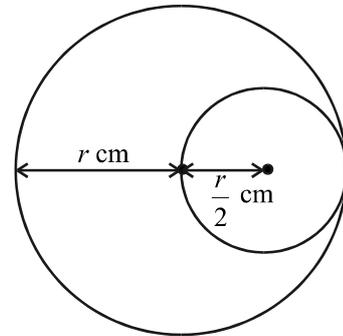

Find the distance of the centre of gravity of the shape  $abcd$  from  $[ab]$ .

- (b) A uniform lamina is in the form of a circle of radius  $r$ .

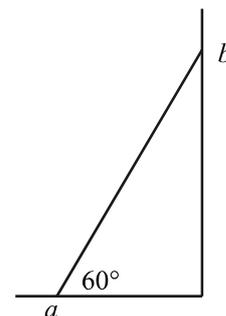

A circle of radius  $\frac{r}{2}$  is cut from the lamina.

The distance between the centres of the two circles is  $\frac{r}{2}$ .

Find the position of the centre of gravity of the remainder in terms of  $r$ , with respect to the centre of the circle of radius  $r$ .

7. A uniform ladder,  $[ab]$ , of weight  $W$  and of length 10 m, stands with end  $a$  on a rough horizontal floor and end  $b$  against a smooth vertical wall. The coefficient of friction between the ladder and the ground is  $\mu$ . The ladder makes an angle of  $60^\circ$  with the floor, as shown.

A man, whose weight is twice that of the ladder, climbs to the top of the ladder.

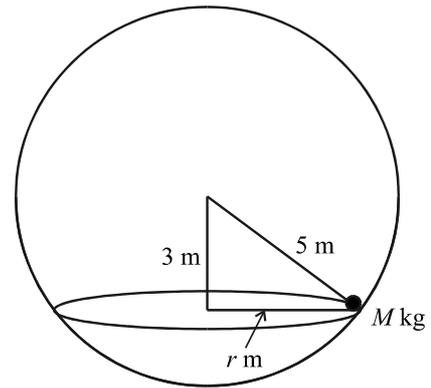

- Show on a diagram all the forces acting on the ladder.
- Write down the two equations that arise from resolving the forces horizontally and vertically.
- Write down the equation that arises from taking moments about the point  $b$ .
- If the ladder is on the point of slipping, find the value of  $\mu$ .

8. (a) A boy ties a 1 kg mass to the end of a piece of string 50 cm in length.

He then rotates the mass on a smooth horizontal table, so that it describes a horizontal circle whose centre is also on the table.

If the string breaks when the tension in the string exceeds 8 Newtons, what is the greatest speed with which the boy can rotate the mass?

- (b) A circus act uses a fixed spherical bowl of inner radius 5 m. A girl and her motorcycle together have a mass of  $M$  kg, as shown in the diagram. The girl and her motorcycle describe a horizontal circle of radius  $r$  m, with angular velocity  $\omega$  rad/s, on the inside rough surface of the bowl. The centre of the horizontal circle is 3 m vertically below the centre of the bowl.

The coefficient of friction between the motorcycle tyres and the bowl is  $\frac{3}{4}$ .

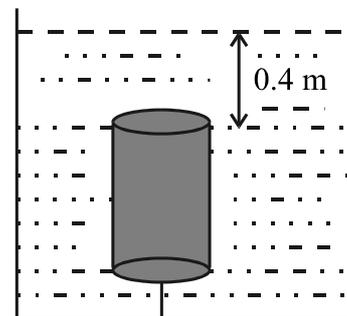

- (i) Find the value of  $r$ .  
(ii) Show on a diagram all the forces acting on the mass  $M$ .  
(iii) Find the value of  $\omega$ , correct to two decimal places.

9. (i) State the Principle of Archimedes.

- (ii) Calculate the pressure at a point in a liquid, of relative density 1.2, if the point is 0.4 m vertically below the surface.

A right circular solid cylinder has a height of 0.6 m and radius 0.2 m. The cylinder is held immersed in a tank of liquid of relative density 1.2 by a light inelastic string tied to the cylinder and to the bottom of the tank.

The top of the cylinder is horizontal and is 0.4 m below the surface of the liquid.

- (iii) Find, in terms of  $\pi$ , the thrust downwards on the top of the cylinder.  
(iv) Find, in terms of  $\pi$ , the thrust upwards on the bottom of the cylinder.  
(v) Show that these results are in agreement with the Principle of Archimedes.

[Density of water = 1000 kg/m<sup>3</sup>.]
